

Breastfeeding

Baby's 1st Immunization

New babies are at risk for many infections. It is important that they receive all recommended immunizations. Breast milk is not only the perfect food, but it is loaded with infection-fighting substances that help protect babies right from birth. It even makes some immunizations work better. Breastfeeding truly is “Baby’s First Immunization.”

American Academy of Pediatrics

DEDICATED TO THE HEALTH OF ALL CHILDREN™

This poster is supported by the American Academy of Pediatrics Section on Breastfeeding; the Childhood Immunization Support Program, a grant from the Centers for Disease Control and Prevention, Cooperative Agreement U66/IP000400-05; and the Strategic Partnerships to Advance Maternal and Child Health program, a grant from the Health Resources and Services Administration Maternal and Child Health Bureau, Grant UC4MC21534.
